EXECUTIVE SUMMARY OF IMPACT ASSESSMENT CONDUCTED FOR THE CSR PROJECTS UNDERTAKEN DURING THE FY 2021-22

a. Executive Summary:

Cancer care and eye care in India face significant challenges due to the vast population, limited resources, and disparities in healthcare access. India reported 14.13 lakh new cancer cases and 9.16 lakh deaths due to cancer in 2022, with cancer cases projected to increase by 12.8% by 2025. Additionally, India is home to one-fourth of the world's blind population, with cataract being the leading cause of blindness, accounting for about 62.6% of cases.

To address these challenges, The Clearing Corporation of India Limited (CCIL) initiated projects to provide cancer and eye care treatment and facilities across eight states in India. By collaborating with non-profit organizations, CCIL aimed to enhance access to healthcare services, especially in underserved areas, focusing on cancer patients and improving eye care services.

CCIL partnered with organizations like **Tata Memorial Centre, Indian Cancer Society, and Medical Research Foundation** to provide financial aid for cancer treatment, procure advanced equipment like Sanger Sequencers for gene sequencing in Varanasi, and support ophthalmic care by procuring essential equipment for diagnosing and treating eye diseases in Chennai and Kolkata.

The projects supported over **1251 cancer patients through financial aid and treatment and thousands with eye check-ups and diagnosis**, benefiting from advanced equipment for cancer detection and eye care treatment. The initiatives provided crucial financial support, accommodation facilities, advanced equipment, and training for healthcare professionals, ultimately improving patient outcomes

THE CLEARING CORPORATION OF INDIA LIMITED

and addressing the growing burden of cancer and eye diseases in India. Through these varied projects, CCIL showcased its dedication to advancing societal welfare and addressing the healthcare needs of vulnerable populations within communities.

b. Impact of Emergency Funding for Initial Diagnosis/Initiating treatment of cancer and complete adoption of children / young adults for cancer treatment

A total of 210 children benefited from both the Emergency Fund and Complete Financial Adoption programs. The children's ages up to 15 years for the Emergency Fund and for the Complete Financial Adoption. The **primary goal of assisting with initial diagnosis and supporting families in need with treatments and therapy has been successfully achieved**. Patient families expressed satisfaction and gratitude towards the project. The key impact of the project highlights below:

- The doctors at the TMH played a crucial role in creating awareness and initial communication about the financial assistance available for low-income families through the emergency fund and directed them to the social workers.
- When families recognize the severity of their children's illnesses and are unaware of the treatment costs, they often resort to admitting the patients to private hospitals and borrowing money from lenders in times of desperation. In such situations, social workers guide these families, educating them about the expenses involved in private hospitals and informing them about the facilities available at government hospitals.
- The guidance and counselling provided by the social workers, financially and mentally, saved these families from getting into the debt trap, poverty, and depression.
- The parents expressed satisfaction with communication, support, and fund delivery. They mentioned they had no issues accessing the total financial assistance for their children's treatment.

THE CLEARING CORPORATION OF INDIA LIMITED

In economic terms, the project relies on donors to fund diagnosis and treatment services until patients can access government health services or secure additional donor support, which makes the project reliant on continuous external funding. However, the project intervention yielded positive long-term outcomes by improving patient health and alleviating family financial burdens. Thus creating a sustainable, long-term impact.

c. Impact of Procurement of the Sanger Sequencer equipment used for the sequencing of genes which are affected or modified in various types of cancers

The introduction of the Sanger Sequencer equipment in Varanasi successfully achieved its primary objectives, including enhancing in-house diagnostic capabilities, reducing turnaround time for test results, improving the precision and effectiveness of cancer treatment for patients, and ultimately lowering cost and time requirements.

- Installing the Sanger Sequencer has notably enhanced the Hematopathology department's efficiency by reducing turnaround times and dependency on external labs for sequencing.
- The hospital staff training equipped them with the necessary skills and confidence to operate the machine proficiently. Over the past two years, continuous learning and hands-on experience have further enhanced their proficiency during the assessment.
- All respondents unanimously stated that the Sanger Sequencer delivers excellent quality and accurate results. From the patients' perspective, while they may not be expected to be familiar with the technical or medical procedures of the equipment, they undoubtedly benefited from reduced treatment costs at subsidized rates for eligible patients.

The equipment has a lifespan of 8-10 years and undergoes preventive maintenance every six months by the biomedical department to ensure continuous functionality. This regular maintenance provides sustained performance, making it beneficial for the future and

THE CLEARING CORPORATION OF INDIA LIMITED

enabling affordable and efficient diagnosis. Thus, the objective of reducing turnaround time and improving in-house diagnosis capabilities will continue to benefit the patients visiting the two hospitals in Varanasi.

d. Impact of Cancer Cure Fund (CCF) and Dr. Arun Kurkure Initiation and Treatment Fund (AKITF)

The Dr Arun Kurkure Initiation and Treatment Fund offered financial aid to 1041 underprivileged patients who lacked the means to cover the initial costs of cancer diagnostics and/or treatment, ensuring they could start the process until they received complete financial aid. Eligibility criteria required that the patient's annual family income not exceed INR 4,00,000.

- Hospitals covered the treatment costs under the AKITF and relevant state schemes. As state schemes require processing time and urgent diagnosis is essential, they initiated treatment through the support provided by CCIL till they could process the relevant state schemes.
- Most respondents expressed receiving timely support from the hospitals and the social workers in accessing quality healthcare, and the beneficiaries were observed to be in better health at the time of assessment.
- A few respondents mentioned receiving the funds directly from the hospital under their relevant central and state health schemes, such as Ayushman Bharat, Atal Amrit, and Mahatma Phule schemes. This lack of clear communication regarding the source of funds made it difficult to assess the impact on patients, as the majority had never heard of the ICS and the AKITF fund.
- Along with the impact on health, the project was observed to positively impact the family's mental health due to the timely support and communication provided by the social workers and the regular follow-up treatment.

The hospitals have been noted for their robust follow-up and aftercare support, ensuring patients receive necessary treatment and medications beyond the primary intervention. This ongoing assistance demonstrates long-term sustainability, as evidenced by patients receiving guidance and support two years after the project's conclusion, indicating a lasting positive impact.

THE CLEARING CORPORATION OF INDIA LIMITED

e. Impact of Support for ophthalmic care for poor and needy Patients

The objective of upgrading the existing equipment at Sankara Nethralaya Main Hospital in Chennai and Aditya Birla Sankara Nethralaya in Kolkata was to provide accurate results for ophthalmic care aimed at reducing the diagnosis time, and improve the test results and patient service.

- In Chennai, introducing the Ultra-Wide Field Imaging System eliminated the need for the three pieces of equipment, and better results were achieved. This system offers a 200-degree ultra-wide imaging capability of the retina. It helps in early diagnosis through accurate imaging, saving skilled manual hours and patient waiting time.
- The three new equipment supported by CCIL at Kolkata significantly improved efficiency and accuracy at Sankara Netralaya. Previously, patient check-ups took 30-40 minutes, but with the latest equipment, this time was reduced to 15-20 minutes per_patient. These devices provided highly accurate diagnostic results and were user-friendly, requiring only basic technical skills like smartphone operating.
- The hospital administration underwent training provided by the equipment provider and conducted regular maintenance activities every six months with the assistance of the biomedical department at the respective branches.
- The beneficiaries have expressed satisfaction and happiness with the free medical care and treatment services. Cataract treatment was the most common among the respondents, followed by treatment for glaucoma.

With a lifespan of 5-10 years and regular biannual maintenance, all four pieces of equipment donated have incorporated longevity and are expected to continue to deliver positive results for the beneficiaries till the end of the life cycle. The hospital administration also expressed to improve the daily tests to increase usage and derive maximum economic benefit from the devices to benefit more underserved patients.

THE CLEARING CORPORATION OF INDIA LIMITED

By focusing on financial assistance, advanced equipment procurement, and capacity building in cancer and eye care services, CCIL's initiatives have made significant strides in mitigating the burden of these diseases in India, and contributed to long term addressing of these issues through quality equipment. This effort contributed to improving cancer treatment accessibility in multiple states, including Maharashtra, Tamil Nadu, Telangana, Gujarat, Karnataka, and Assam.

To further amplify the impact of these initiatives, the study suggests focusing on raising awareness about available schemes for cancer treatment to effectively reach more beneficiaries, especially in rural India. Additionally, enhancing accommodation facilities for patients undergoing treatment could improve their overall experience and ensure continuous care. By addressing these areas, CCIL could bolster its influence on cancer treatment in India and make substantial contributions to enhancing healthcare outcomes for vulnerable populations.

f. Conclusion:

The Clearing Corporation of India Limited (CCIL) launched significant initiatives to enhance cancer and eye treatment in India through partnerships with various non-profit organizations. These collaborations established crucial aid through initiatives like the Emergency Fund, Complete Financial Adoption, Cancer Cure Fund, and the Dr. Arun Kurkure Initiation and Treatment Fund (AKITF). These programs provided financial assistance to underprivileged cancer patients for their treatment needs. For instance, the Cancer Cure Fund offered financial aid of up to 5 lakh Indian rupees to eligible patients, covering services such as surgery, chemotherapy, and supportive care at affiliated hospitals. Complete Financial Adoption supported pediatric cancer patients with up to 4 lakhs, while AKITF and the Emergency Fund provided support for cancer diagnosis, offering up to 25,000 and 50,000 rupees respectively.

Across the various initiatives, the project provided support to 1251 cancer patients, offering diagnosis and/or treatment assistance. This effort contributed to improving cancer treatment accessibility in multiple states, including Maharashtra, Tamil Nadu, Telangana, Gujarat, Karnataka, and Assam. In addition to financial aid, the project also invested in procuring and installing a Sanger Sequencer at HBCH,

THE CLEARING CORPORATION OF INDIA LIMITED

Varanasi. This equipment enhancement bolstered the hospital's diagnostic capabilities, particularly in targeted gene sequencing, resulting in halving of diagnosis time compared to previous procedures.

Additionally, CCIL extended its efforts to improve eye care services by procuring essential equipment for diagnosing and treating eye diseases in Chennai and Kolkata. With the introduction of these equipment with a lifespan of 5-10 years, an estimated 1 lakh patients will benefit with accurate diagnosis of their eye diseases, and reduced waiting time over the next 5 years.

To further amplify the impact of these initiatives, the study suggests focusing on raising awareness about available schemes for cancer treatment to effectively reach more beneficiaries, especially in rural India. Additionally, enhancing accommodation facilities for patients undergoing treatment could improve their overall experience and ensure continuous care. By addressing these areas, CCIL could bolster its influence on cancer treatment in India and make substantial contributions to enhancing healthcare outcomes for vulnerable populations.

About The Impact Assessment Agency:

NuSocia is an impact advisory firm, headquartered at Pune and having its consultants working across Delhi, Mumbai, Bangalore, Kolkata and Pune and at locations outside India at Dubai, Toronto and Muscat.

Established in 2017 and incubated at IIM Bangalore NSCRCEL, NuSocia is working with the mission to enable the Social ecosystem with impact that is evident. The team comprise of consultants, researchers, social sector professionals and data scientists with a common passion to generate ideas that matter for the people and the planet. It work with Corporates, Governments, Foundations, and Non-profits to help them maximize, manage, measure, and communicate their social impact.
